

Innovative Ways To Save On Your **Energy Bill**

With the price of residential electricity expected to increase another **10% by 2024**, finding ways to reduce energy waste should be at the top of every homeowner's to-do list.

BEDROOMS

LED Lightbulbs

LED bulbs last 25 times longer than incandescent bulbs and use 75% less energy.

Energy-efficient Windows

Every year, \$50 billion in U.S. home energy waste is attributed to inefficient windows.

Energy Star-labeled Ceiling Fans

These fans are 60% more efficient than conventional units.

ROOF

Solar Panels

Switching to solar energy can add up to \$20,000 on average in lifetime savings.

Attic insulation

Properly insulating the attic can reduce an energy bill by 10-50%.

BACKYARD

Rain Barrels

Watering the garden with rain from the barrel can save upwards of 1,300 gallons per year.

Shade Landscaping

Strategically located trees can decrease your home's temperature by 3 degrees F.

KITCHEN

Energy-efficient Appliances

LEED-certified homes use an average of 20-30% less energy.

Convection Ovens

Convection models use about 20% less electricity than conventional ovens.

LIVING ROOM

Energy Star-certified Smart Thermostats

Homeowners can save 8-15% on electricity costs with programmable thermostats.

Smart Motion Sensors

Smart switches with motion sensors can reduce waste and save up to \$100 a year by turning lights off automatically.

LAUNDRY ROOM & BASEMENT

Clotheslines & Racks

Air drying on lines and racks greatly reduces energy consumption.

Energy Star Washers & Dryers

Certified models use one-fourth less energy than standard models.

Tankless Water Heater

Tankless water heaters use 30-50% less energy than units with tanks.

Water Heater Insulation

Homeowners can save \$250 annually on utilities by insulating the water heater.
